En el Perú, según la Dirección General de Epidemiología (DGE), los casos de cáncer de piel representan el 6,6% del total de cánceres registrados. El cáncer de piel ocupa el cuarto lugar de frecuencia a nivel nacional (superado por el cáncer de cérvix, estómago y mama). Las regiones donde la distribución proporcional del cáncer de piel respecto al total de neoplasias registradas es superior al promedio nacional (6,6%) han sido La Libertad (10,7%), Cajamarca (9,5%), Madre de Dios (9,2%), San Martín (8,0%), Amazonas (7,9%), Lima (7,9%), Arequipa (7,8%), Ayacucho (7,3%) y Ucayali (7,1%).<sup>(1)</sup> Existen varios tipos de cáncer de piel, entre los que destacan de forma clara los melanomas y los carcinomas cutáneos. En ambos tipos, el principal factor de riesgo implicado en su aparición son las radiaciones solares, sobre todo las de tipo B (UVB) y las de tipo A (UVA). En la piel, estas radiaciones son capaces de producir mutaciones en el material genético (ADN) de las células que componen la epidermis, iniciándose así el proceso de la carcinogénesis o formación de un cáncer. El principal factor de riesgo para el desarrollo de cáncer de piel es la exposición intensa a la radiación

ultravioleta (RUV). La RUV se divide en radiación ultravioleta A (UVA), B (UVB) y C (UVC).

La UVC es filtrada por la capa de ozono en la estratósfera y solo la A y B inciden en la superficie de la tierra y, por ende, en nuestra piel. El principal factor de riesgo para el desarrollo de cáncer de piel es la exposición acumulativa y/ o intermitente intensa a la radiación ultravioleta. Se recomienda emplear elementos que favorezcan la fotoprotección como sombreros, ropa y lentes adecuados, sombrillas y toldos tupidos o gruesos, y de ser posible aplicarse un fotoprotector treinta minutos antes de salir y reaplicarse cada una o dos horas, según la actividad deportiva o laboral a realizar.

## Situación epidemiológica de las Enfermedades Diarreicas Agudas (EDAs) en la Red de Salud Huaura Oyón a la SE 48-2018

En la semana epidemiológica N° 48 se registran 322 episodios de enfermedad diarreica aguda (EDAs) TIA 12.7 por 10000 habitantes, tendencia que disminuye en un 4% en relación a la semana anterior, 305 casos proceden de distritos ubicados en provincia de Huaura, 14 de distritos de la provincia de Oyón, se han atendido también a 12 personas procedentes de otras provincias (visitantes).

Considerando los grupos de edad; 30 casos fueron en menores de 01 año de edad, 85 casos en niños de 1 a 4 años de edad y 207 casos en mayores de 5 años de edad.

Los episodios presentados según tipos son 328 acuosas y 3 disintéricas. Se registran 4 hospitalizados de los cuales 2 de 1a 4 años. 2 en mayores de 5 años.

El promedio semanal es de 236 casos. Los distritos que aportan con el mayor número de casos en el escenario costa son: Huacho, Huaura, Hualmay, Santa María y Sayán.

El acumulado anual (a la semana N° 48) es de 12109 episodios (TIA 477.4 casos por 10000 habitantes). Los Distritos de mayor riesgo son: Ihuari-Acotama, Huacho, Santa Leonor, Pachangara, Cochamarca, Paccho, Leoncio Prado y Navan.

En el canal endémico nos ubicamos en la Zona de Epidemia contexto que nos permite proponer la evaluación continua de las localidades/centros poblados más afectados y continuar con intervenciones preventivas y de control.

## Vigilancia de Febriles

Hasta la S.E N° 48 se reportan 15621 pacientes febriles atendidos en los establecimientos de la Red Huaura Oyón, de ellos en Huacho 33.31% (5202), Santa María 17.86% (2789), Hualmay 14.34% (2239), Huaura 10.87% (1698), Vegueta 10.61% (1657), Sayán 4.33% (677), Carquín 2.69% (420), Pachangara 1.72% (268), Oyón 1.2% (188), Otros Distritos 0.94% (147), Paccho 0.67% (105), Ámbar 0.35% (55), Santa Leonor 0.35% (54), Leoncio Prado 0.25% (39), Cochamarca 0.23% (36), Caujul 0.16% (25) e Ihuari 0.06% (10).

### TOTAL DE FEBRILES POR GRUPO ETAREO RED HUAURA OYON (ACUM. SE 48 - 2018)

| GRUPO ETAREO | TOTALES | PROP |
|--------------|---------|------|
| MEN.1A       | 2149    | 13.8 |
| DE 1 A 4A    | 5266    | 33.7 |
| DE 5 A 9A    | 2483    | 15.9 |
| DE 10 A 19A  | 1586    | 10.2 |
| DE 20 A 59A  | 3376    | 21.6 |
| DE 60 A MAS  | 761     | 4.9  |
| TOTAL        | 15621   | 100  |

FUENTE: EPIDEMIOLOGIA RED HUAURA OYON

La distribución de febriles por grupo etáreo se concentra en el grupo de 1 a 4 años con 33.71% (5266 casos), seguidamente del grupo de 20 a 59 años con 21.61% (3376 casos), el grupo de 5 a 9 años con 15.9% (2483 casos) el grupo menores de 1 año con 13.76% (2149 casos) el grupo de 10 a 19 años con 10.15% (1586 casos) y el grupo de 60 a más con 4.87% (761 casos).

El promedio semanal de febriles en el periodo fue de 335, el promedio de las últimas 5 semanas es de 283. La tasa de variación en el menor de 5 años, en la semana 48 respecto al acumulado de las semanas anteriores es del -11 % y en el de mayores de 5 años es del -11%, tendencia incrementada en la última semana es importante el seguimiento y análisis del diagnóstico médico.

Los resultados de la vigilancia entomológica al mes de Noviembre tipificaron 35 localidades en escenario II. A la fecha no se han encontrado casos probables ni sospechosos de dengue, el acumulado es de 0 casos.

### **Conclusión**

- La tendencia de casos de febriles ha disminuido en los diferentes grupos de edad en relación al año anterior, al analizar las causas se evidencia asociación con la disminución de las infecciones respiratorias agudas.
- La demanda de atenciones en el Hospital Regional de Huacho por casos de pacientes febriles se concentra en la emergencia.
- A la fecha no se ha encontrado casos probables, ni sospechosos de dengue el acumulado es de 0 casos.
- La vigilancia de febriles del Hospital Regional de Huacho es activa y las acciones de prevención y control se han intensificado ante la presencia de *Aedes Aegypti* y la dispersión de los escenarios entomológicos.

### **Acciones Efectuadas**

- a) Monitoreo diario, semanal y análisis de la tendencia de febriles.
- b) Identificación de localidades con mayor procedencia de casos de febriles
- c) Toma de muestras según protocolo de vigilancia de febriles y casos probables.
- d) Desarrollo de actividades de Información y comunicación a equipos de trabajo respecto a vigilancia de febriles.
- e) Difusión de afiches con definiciones de caso en los servicios de la institución y Centros Periféricos.
- f) Monitoreo de aspectos conceptuales en supervisión en servicio.
- g) Reuniones del equipo multidisciplinario para análisis de los resultados de la vigilancia entomológica y vigilancia epidemiológica.
- h) Visitas de coordinación con autoridades locales con quienes se desarrolla acciones integradas.
- i) Incorporación de información en la Sala Situacional en los Municipios Distritales.
- j) Difusión de spot radiales/ televisión/ redes sociales de identificación de febriles vs presencia vectorial.
- k) Socialización de la información en los CERS Regionales/ boletín epidemiológico.
- l) Controles focales integrados en escenario II.

## Vigilancia de Cáncer

A la S.E N° 48 el acumulado de casos de cáncer a la fecha es de 143 casos, (TIA 5.64 por 10000 habitantes). La TIA acumulada por Distritos es Navan (TIA 8.60 casos por 10000 habitantes), Hualmay (TIA 8.39 casos por 10000 habitantes), Santa María (TIA 8.00 casos por 10000 habitantes), Huacho (TIA 7.85 casos por 10000 habitantes), Vegueta (TIA 6.00 casos por 10000 habitantes), Leoncio

Prado (TIA 5.03 casos por 10000 habitantes), Caleta de Carquín (TIA 4.28 por 10000 habitantes), Huaura (TIA 3.82 casos por 10000 habitantes), Ámbar (TIA 3.64 casos por 10000 habitantes), Sayán (TIA 2.04 casos por 10000 habitantes), Oyón (TIA 0.71 casos por 10000 habitantes).

Los niveles de riesgo por TIA de cáncer ubican a los distritos de Naván, Hualmay, Santa María, Huacho y Vegueta como de alto riesgo; Leoncio Prado, Caleta de Carquín, Huaura y Ámbar como mediano riesgo y a los Distritos de Sayán y Oyón como bajo riesgo.

El grupo etáreo con mayor número de casos de cáncer es el comprendido entre 60 a 79 años de edad con un total de 36.3% (52), seguido del grupo etáreo de 40 a 59 años con el 35.6% (51) y el grupo etáreo con menor número de casos el comprendido entre 18 a 29 años con 3.49% (5) del total de casos.

En el periodo 2018 al mes de Noviembre en la Red Huaura – Oyón se registraron un total de 143 casos; de los cuales 101 casos de cáncer se registraron en el sexo femenino representando el 70.62% y 42 casos en el sexo masculino representando el 29.3%, tendencia que viene incrementándose en los últimos años.

En relación a los casos de cáncer según su localización, se tiene como principal incidencia al cáncer de cérvix con el 25% de casos reportados, seguido de cáncer de piel con un 14%, en tercer lugar lo ocupa el cáncer de mama con un 11% del total de casos reportados. Casos comparados con la tendencia nacional que ubican al cáncer de cérvix en primer lugar del total de casos

reportados (2729), seguido de cáncer de estómago con (2036) y el cáncer de mama con (1890). Actualmente se vienen implementando políticas sanitarias de prevención primaria y secundaria, así como la ejecución de campañas de tamizaje para los principales tipos de cáncer de acuerdo a lo estipulado por la Estrategia sanitaria Nacional.

## Vigilancia de Muerte Materna

La salud materna en los últimos años ha tenido mejoras importantes y continuas siendo uno de los temas de salud pública prioritarios a nivel nacional e internacional.

Las principales causas de defunción son: Enfermedad hipertensiva, edema y proteinuria en el embarazo, parto y puerperio (27.4%) hemorragia obstétrica (23.9%) y aborto (6.2%). La información generada a nivel nacional y por cada uno de los departamentos del País permitirá orientar las políticas sociales, definir las acciones en salud pública y monitorizar los resultados de las intervenciones generadas en materia de salud materna.

En el Perú, el registro de muertes maternas se realiza mediante dos sistemas, siendo uno de ellos el Sistema Nacional de Vigilancia Epidemiológica, a través de la notificación inmediata (investigación y búsqueda de registros) realizada obligatoriamente por todos los establecimientos de salud del Ministerio de Salud, EsSalud, Fuerzas Armadas, Policía Nacional y privados. Esta notificación inmediata de muertes maternas está a cargo de las Oficinas de Epidemiología de las Direcciones Regionales de Salud y Direcciones de Salud. Una segunda forma de registro es a través del Sistema de Hechos Vitales (HV) que registra los certificados médicos de cada defunción ocurrida a nivel nacional, de igual manera de todas las entidades de salud sin excepción.<sup>1</sup>

Los datos del nivel nacional reportan un total de 315 muertes maternas notificadas, considerándose los casos de muerte materna de clasificación preliminar directa e indirecta. Actualmente se observa una disminución significativa respecto al año 2017 (377 casos) y 2016 (328 casos). El Departamento de Lima tiene una mayor ocurrencia con 59 casos registrados.

UNIDAD DE EPIDEMIOLOGIA Y SALUD AMBIENTAL - RED HUAURA OYON

En la presente semana no se reportaron casos de muertes maternas. El acumulado a la fecha es 0 casos comparado con el año 2017 y 2016 en la que se notificó un caso de muerte materna indirecta respectivamente en cada periodo, provenientes del escenario costa. La Red de Salud viene trabajando diferentes estrategias para reducir la mortalidad materna y neonatal, por medio de la implementación de acciones integrales, mediante la participación de los diferentes actores sociales y sectores involucrados.
