## Vigilancia de la Salud Pública

Mes DICIEMBRE 2018 - Edición LI-UESA

### EDITORIAL

#### Vigilancia de playas y piscinas

Mediante la Directiva Sanitaria N°038 – MINSA – DIGESA V.02 se establece el procedimiento para la evaluación de la calidad sanitaria de las playas del litoral peruano con la finalidad de contribuir a prevenir y controlar los diferentes factores de riesgo de contaminación que se presentan en las playas, que ponen en riesgo la salud de las personas que concurren a ellas.

La calificación sanitaria de las playas en el Perú, se realiza a través del Índice de Calidad Sanitaria de las Playas, donde se emplea para su cálculo tres criterios de calificación: control de la calidad microbiológica del agua de mar; control de la limpieza, donde se trabaja con dos variables, la limpieza de la playa y la presencia de recipientes para los residuos sólidos; el último criterio es el control de los servicios higiénicos.

El cálculo del índice de Calidad Sanitaria permite calificar las playas en tres categorías: Saludable, Regularmente Saludable y No Saludable; las cuales son publicadas en la página Web de la Dirección General de Salud Ambiental para conocimiento de la población, de las playas recomendadas por el Ministerio de Salud para asistir sin tener riesgos a la salud, tanto en la temporada de verano donde se da la mayor afluencia de bañistas a las playas así como en el invierno donde se practican deportes acuáticos.

## SITUACIÓN EPIDEMIOLÓGICA DE LAS ENFERMEDADES DIARREICAS AGUDAS (EDAs)

En la semana epidemiológica N° 51 se registran 334 episodios de enfermedad diarreica aguda (EDAs) TIA 13.2 por 10000 Hab. tendencia que incrementa en un 4% en relación a la semana anterior, 316 casos proceden de distritos ubicados en provincia de Huaura, 16 de distritos de la provincia de Oyón, se han atendido también a 22 personas procedentes de otras provincias (visitantes).

Considerando los grupos de edad; 34 casos fueron en menores de 01 año de edad, 98 casos en niños de 1 a 4 años de edad y 202 casos en mayores de 5 años de edad.

Los episodios presentados según tipos son 348 acuosas y 6 disintéricas. Se registran 2 hospitalizados de los cuales 1 menor de 1 año. 1 de 1a 4 años.

Como parte de la gestión de riesgos mostramos la tendencia de la estación de verano 2018 iniciándose la observación en la semana 39 del 2017 la tendencia se disminuye en un 9% comparada con los dos veranos anteriores. El promedio semanal es de 236 casos. Los distritos que aportan con el mayor número de casos en el escenario costa son: Huacho, Huaura, Hualmay y Santa María.

El acumulado anual (a la semana N° 51) es de 13121 episodios (TIA 517.3 casos por 10000 habitantes). Los Distritos de mayor riesgo son: Cochamarca, Ihuari-Acotama, Huacho, Navan y Leoncio Prado, Pachangara, Paccho

En el canal endémico nos ubicamos en la Zona de Epidemia contexto que nos permite proponer la evaluación continua de las localidades/centros poblados más afectados y continuar con intervenciones preventivas y de control.

Unidad de Epidemiología y Salud Ambiental

## VIGILANCIA DE FEBRILES

Hasta la S.E N° 51 se reportan 16633 pacientes febriles atendidos en los establecimientos de la Red Huaura Oyón, de ellos en Huacho 33.63% (5593), Santa María 17.82% (2963), Hualmay 14.29% (2376), Huaura 10.75% (1788), Vegueta 10.55% (1755), Sayán 4.26% (709), Carquín 2.66% (442), Pachangara 1.68% (280), Oyón 1.17% (195), Otros Distritos 0.96% (159), Paccho

0.71% (118), Santa Leonor 0.41% (68), Ambar 0.36% (60), Leoncio Prado 0.26% (43), Cochamarca 0.22% (37), Caujul 0.15% (25) e Ihuari 0.06% (10).

La distribución de febriles por grupo etáreo se concentra en el grupo de 1 a 4 años con 33.81% (5624 casos), seguidamente del grupo de 20 a 59 años con 21.47% (3571 casos), el grupo de 5 a 9 años con 15.87% (2640 casos) el grupo menores de 1 año con 13.66% (2272 casos) el grupo de 10 a 19 años con 10.3% (1713 casos) y el grupo de 60 a más con 4.89% (813 casos).

**TOTAL DE FEBRILES POR GRUPO ETAREO**  
RED HUAURA OYON (ACUM. SE 51 - 2018)

| GRUPO ETAREO | TOTALES | PROP |
|--------------|---------|------|
| MEN. 1A      | 2272    | 13.7 |
| DE 1 A 4A    | 5624    | 33.8 |
| DE 5 A 9A    | 2640    | 15.9 |
| DE 10 A 19A  | 1713    | 10.3 |
| DE 20 A 59A  | 3571    | 21.5 |
| DE 60 A MAS  | 813     | 4.9  |
| TOTAL        | 16633   | 100  |

FUENTE: EPIDEMIOLOGIA RED HUAURA OYON

El promedio semanal de febriles en el periodo fue de 335, el promedio de las últimas 5 semanas es de 314. La tasa de variación en el menor de 5 años, en la semana 51 respecto al acumulado de las semanas anteriores es del 13 % y en el de mayores de 5 años es del 19%, es importante el seguimiento y análisis del diagnóstico médico.

Los resultados de la vigilancia entomológica al mes de Diciembre tipificaron 35 localidades en escenario II. A la fecha no se han encontrado casos probables ni sospechosos de dengue, el acumulado es de 0 casos.

### **Conclusión**

- La tendencia de casos de febriles ha aumentado en los diferentes grupos de edad en relación al año anterior, al analizar las causas se evidencia asociación con el aumento de las infecciones diarreicas agudas.
- La demanda de atenciones en el Hospital Regional de Huacho por casos de pacientes febriles se concentra en la emergencia.
- A la fecha no se ha encontrado casos probables, ni sospechosos de dengue el acumulado es de 0 casos.
- La vigilancia de febriles del Hospital Regional de Huacho es activa y las acciones de prevención y control se han intensificado ante la presencia de *Aedes Aegypti* y la dispersión de los escenarios entomológicos.

### **Acciones Efectuadas**

- a) Monitoreo diario, semanal y análisis de la tendencia de febriles.
- b) Identificación de localidades con mayor procedencia de casos de febriles
- c) Toma de muestras según protocolo de vigilancia de febriles y casos probables.
- d) Desarrollo de actividades de Información y comunicación a equipos de trabajo respecto a vigilancia de febriles.
- e) Difusión de afiches con definiciones de caso en los servicios de la institución y Centros Periféricos.
- f) Monitoreo de aspectos conceptuales en supervisión en servicio.
- g) Reuniones del equipo multidisciplinario para análisis de los resultados de la vigilancia entomológica y vigilancia epidemiológica.
- h) Visitas de coordinación con autoridades locales con quienes se desarrolla acciones integradas.
- i) Incorporación de información en la Sala Situacional en los Municipios Distritales.
- j) Difusión de spot radiales/ televisión/ redes sociales de identificación de febriles vs presencia vectorial.
- k) Socialización de la información en los CERS Regionales/ boletín epidemiológico.
- l) Controles focales integrados en escenario II.

## VIGILANCIA POR ORGANO FOSFORADOS

En relación a la vigilancia por órgano fosforado en la Semana Epidemiológica N° 51 se reporta 3 casos.

El acumulado a la fecha es de 89 casos, (TIA 3.51 por 10000 habitantes). La TIA acumulada por Distrito: Carquin (TIA 5.71 casos por 10000 habitantes), Hualmay (TIA 1.68 casos por 10000 habitantes), Sayán (TIA 4.9 casos por 10000 habitantes) y Huacho (TIA 1.41 casos por 10000 habitantes) y Ambar (TIA 14.54 casos por 10000 habitantes) y Huaura (TIA 6.01 casos por 10000 habitantes), Vegueta (23 casos, TIA 9.86 por 10000 habitantes) y Santa Maria (10 casos, TIA 2.86 por 10000 habitantes) y Otros Distritos (1 casos).

La distribución por grupo etáreo 6.74% de los casos corresponden al grupo etáreo de 0 - 11 años, 5.62% de los casos corresponden al grupo de 12 - 17 años, 31.46% al grupo de 18 - 29 años, 50.56% al grupo de 30 - 59 años y el 5.62% al grupo de 60 a más respectivamente. Todos los casos fueron dados de alta con evolución favorable.

## VIGILANCIA DE MUERTE MATERNA

La salud materna en los últimos años ha tenido mejoras importantes y continuas siendo uno de los temas de salud pública prioritarios a nivel nacional e internacional.

Las principales causas de defunción son: Enfermedad hipertensiva, edema y proteinuria en el embarazo, parto y puerperio (27.4%) Hemorragia obstétrica (23.9%) y Aborto (6.2%). La información generada a nivel nacional y por cada una de los departamentos del País permitirá orientar las políticas sociales, definir las acciones en salud pública y monitorizar los resultados de las intervenciones generadas en materia de salud materna.

En el Perú, el registro de muertes maternas se realiza mediante dos sistemas, siendo uno de ellos el Sistema Nacional de Vigilancia Epidemiológica, a través de la notificación inmediata (investigación y búsqueda de registros) realizada obligatoriamente por todos los establecimientos de salud del Ministerio de Salud, EsSalud, Fuerzas Armadas, Policía Nacional y privados. Esta notificación inmediata de muertes maternas está a cargo de las Oficinas de Epidemiología de las Direcciones Regionales de Salud y Direcciones de Salud. Una segunda forma de registro es a través del Sistema de Hechos Vitales (HV) que registra los certificados médicos de cada defunción ocurrida a nivel nacional, de igual manera de todas las entidades de salud sin excepción.

Los datos del nivel nacional reportan un total de 315 muertes maternas notificadas, considerándose los casos de muerte materna de clasificación preliminar directa e indirecta. Actualmente se observa una disminución significativa respecto al año 2017 (377 casos) y 2016 (328 casos). El Departamento de Lima tiene una mayor ocurrencia con 59 casos registrados.

UNIDAD DE EPIDEMIOLOGIA Y SALUD AMBIENTAL - RED HUAURA OYON

En la presente semana no se reportaron casos de muertes maternas. El acumulado a la fecha es 0 casos comparado con el año 2017 y 2016 en la que se notificó un caso de muerte materna indirecta respectivamente en cada periodo, provenientes del escenario costa. Por lo que se vienen trabajando diferentes estrategias para reducir la mortalidad materna y neonatal, por medio de la implementación de acciones integrales, mediante la participación de los diferentes actores sociales y sectores involucrados.

## LEPTOSPIROSIS

La leptospirosis es una enfermedad infecciosa causada por bacterias llamadas leptospiras que son transmitidas, directa o indirectamente, de los animales a los seres humanos.

En el Perú; desde la S.E. 1 hasta la S.E. 49 – 2018 según la Dirección general de Epidemiología se han notificado 2668 casos de Leptospirosis en el País y 8 fallecidos. En el año 2017, en el mismo periodo se notificó 3218 casos en el País, la TIA fue de 10.1 casos por 100 mil habitantes; así mismo se notificaron un total de 13 personas fallecidas.

## VIGILANCIA SANITARIA DE PLAYAS Y PISCINAS

En el proceso de vigilancia de playas se consideran los criterios de Control de calidad microbiológica del agua, control de la limpieza de la arena, la existencia de servicios higiénicos y recipientes para residuos sólidos. El criterio de mayor importancia para la calificación es la calidad microbiológica del agua.

En nuestro litoral contamos con 11 playas consideradas como aptas para bañistas; las mismas que están siendo vigiladas semanalmente teniendo en cuenta que los resultados pueden variar de una semana a otra.

**Resumen:** Tal como se aprecia en la tabla N°01 de reporte de calificación sanitaria de playas observamos que las condiciones del agua son buenas en su totalidad; en lo que respecta a la calidad de la arena concluimos que 6 playas son calificadas como buenas, 4 en condición de regulares y 1 playa considerada como mala; también se evalúan situaciones como son la ausencia de recipientes para la eliminación de residuos sólidos y servicios higiénicos; contexto que ha llevado a citar el tema en reuniones de trabajo con el equipo responsable para estas acciones por lo que se esperan mejores resultados para la semana epidemiológica N°52.

Tabla N° 01

| <b>SALUDABLE</b>    |
| <b>NO SALUDABLE</b> |

En la provincia existen 35 piscinas; 09 ubicadas en el distrito de Huacho, 22 en el Distrito de Santa María, 01 en el Distrito de Hualmay, 01 en el Distrito de Vegueta y 03 en el Distrito de Sayán. La vigilancia sanitaria se desarrolla teniendo en consideración la fecha de inicio de funcionamiento brindando servicios al público.

El equipo sanitario de la Red Huaura Oyón efectúa la Calificación Sanitaria de las Piscinas considerando parámetros que concluyen en cumplimiento o incumplimiento; finalmente distribuidos en orden de prioridad de la siguiente manera:

- Control de Calidad Microbiológica
  - Cloro residual
  - Coliformes termotolerantes
  - Turbiedad.
- Control de Calidad de Equipamientos e Instalaciones
  - Servicios Higiénicos y ducha
  - Sistema de recirculación

c. Control de Calidad de Limpieza

Limpieza del local

Limpieza del estanque

Criadero de Aedes Aegypti

Cuerpo de agua

d. Control de Ordenamiento Documentario

Cuaderno o libro de registro

Aprobación Sanitaria

En la semana 51 se efectuó la evaluación de las Piscinas a 11 locales; es decir el 21.25% ya que a la fecha aún el 45.45% de locales están cerrados, el 30.30% están en mantenimiento, el 3.0% permanecen como piscinas vacías. De las piscinas evaluadas concluimos que el 6.0% se encuentran en condición de saludables por lo que se viene desarrollando capacitación y orientación a los propietarios sobre la importancia de brindar una piscina con parámetros permisibles a fin de conseguir resultados adecuados basándonos en la Directiva Sanitaria N°033-MINSA/DIGESA-V01 que establece los criterios para el procedimiento de calificación sanitaria de las piscinas públicas y privadas de usos colectivos a nivel nacional.

Durante el proceso de evaluación los datos recopilados en la inspección técnica serán empleados para la determinación del cálculo del Índice de Calidad Sanitaria de las Piscinas (ICSPS)

A 13 establecimientos se le ha caducado la autorización sanitaria los cuales son: I.E.P. Nuestra Señora de la Merced, Villa Deportiva Los Delfines, Hotel Pacifico, Hotel Sol Y Palmeras (Distrito Huacho), Centro Recreacional Inversiones y Negociaciones FYM E.I.R.L.
