### 2100 millones de personas carecen de agua potable en el hogar y más del doble no disponen de saneamiento seguro

En todo el mundo, alrededor de 3 de cada 10 personas, o 2100 millones de personas, carecen de acceso a agua potable y disponible en el hogar, y 6 de cada 10, o 4500 millones, carecen de un saneamiento seguro, según un nuevo informe de la Organización Mundial de la Salud (OMS) y del UNICEF.

El informe del Programa Conjunto de Monitoreo (JMP), *Progresos en materia de agua potable, saneamiento e higiene: informe de actualización de 2017 y evaluación de los ODS*, presenta la primera evaluación mundial de los servicios de agua potable y saneamiento «gestionados de forma segura». La conclusión fundamental es que todavía hay demasiadas personas que no tienen acceso, sobre todo en las zonas rurales.

### Persisten importantes desigualdades

Con el fin de reducir las desigualdades mundiales, los nuevos ODS exhortan a poner fin a la defecación al aire libre y a lograr el acceso universal a los servicios básicos para 2030.

De los 2100 millones de personas que no disponen de agua gestionada de forma segura, 844 millones no tienen ni siquiera un servicio básico de agua potable. Esto incluye a 263 millones de personas que tienen que emplear más de 30 minutos por viaje para recoger agua de fuentes que se encuentran lejos de su hogar, y 159 millones que todavía beben agua no tratada procedente de fuentes de agua de superficie, como arroyos o lagos.

En 90 países, el progreso hacia el saneamiento básico es demasiado lento, lo que significa que sus habitantes no alcanzarán la cobertura universal para 2030.

De los 4500 millones de personas que no cuentan con un saneamiento seguro, 2300 millones aún no disponen de servicios básicos de saneamiento. Esto incluye a 600 millones de personas que comparten un inodoro o letrina con otros hogares, y 892 millones de personas –la mayoría en zonas rurales– que defecan al aire libre. Debido al crecimiento demográfico, la defecación al aire libre está aumentando en África subsahariana y Oceanía.

Una buena higiene es una de las formas más simples y efectivas de prevenir la propagación de enfermedades. Por primera vez, los ODS están monitoreando el porcentaje de personas que disponen de instalaciones para lavarse las manos en casa con agua y jabón. Según el nuevo informe, el acceso al agua y el jabón para el lavado de manos varía enormemente en los 70 países con datos disponibles, desde el 15% de la población en África subsahariana hasta el 76% en Asia occidental y África del Norte.

## SITUACIÓN EPIDEMIOLÓGICA DE LAS ENFERMEDADES DIARREICAS AGUDAS (EDAS) EN LA RED DE SALUD HUAURA OYÓN A LA SE 8 - 2019

En la semana epidemiológica N° 8 se registran 274 episodios de enfermedad diarreica aguda (EDAs) TIA 10.7 por 10000 Hab. tendencia que disminuye en un 61% en relación a la semana anterior, 251 casos proceden de distritos ubicados en provincia de Huaura, 20 de distritos de la provincia de Oyón, se han atendido también a 13 personas procedentes de otras provincias (visitantes).

Considerando los grupos de edad; 22 casos fueron en menores de 01 año de edad, 76 casos en niños de 1 a 4 años de edad y 176 casos en mayores de 5 años de edad.

Los episodios presentados según tipos son 284 acuosas. Se registran 4 hospitalizados de los cuales 4 de 1a 4 años.

Como parte de la gestión de riesgos mostramos la tendencia de la estación de verano 2019 iniciándose la observación en la semana 39 del 2018 la tendencia se incrementa en un 31% comparada con los dos veranos anteriores. El promedio semanal es de 345 casos. Los distritos que aportan con el mayor número de casos en el escenario costa son: Huacho, S.María, Huaura y Hualmay.

El acumulado anual (a la semana N° 8) es de 3451 episodios (TIA 134.2 casos por 10000 habitantes). Los Distritos de mayor riesgo son: Huacho, Paccho, Ihuari-Acotama y L.Prado

En el canal endémico nos ubicamos en la Zona de Seguridad contexto que nos permite proponer la evaluación continua de las localidades/centros poblados más afectados y continuar con intervenciones preventivas y de control.

Unidad de Epidemiología y Salud Ambiental

## VIGILANCIA DE FEBRILES

Hasta la semana 8 se reportan 3484 pacientes febriles atendidos en los establecimientos de la Red Huaura Oyón, de ellos en Huacho 33.19% (1156), Santa Maria 18.86% (657), Hualmay 15.07% (525), Huaura 10.19% (355), Vegueta 9.33% (325), Sayan 4.16% (145), Carquin 3.47% (121), Pachangara 1.67% (58), Otros Distritos 1.38% (48), Oyon 0.92% (32), Ambar 0.4% (14), Leoncio Prado 0.4% (14), Santa Leonor 0.29%

(10), Paccho 0.23% (8), Ihuari 0.2% (7), Caujul 0.11% (4) y, Andajes 0.06% (2)

**TOTAL DE FEBRILES POR GRUPO ETAREO**  
RED HUAURA OYON (ACUM. SE 8 - 2019)

| GRUPO ETAREO | TOTALES | PROP |
|--------------|---------|------|
| MEN.1A       | 428     | 12.3 |
| DE 1 A 4A    | 1036    | 29.7 |
| DE 5 A 9A    | 475     | 13.6 |
| DE 10 A 19A  | 418     | 12   |
| DE 20 A 59A  | 916     | 26.3 |
| DE 60 A MAS  | 211     | 6.1  |
| TOTAL        | 3484    | 100  |

FUENTE: EPIDEMIOLOGIA RED HUAURA OYON

La distribución de febriles por grupo etáreo se concentra en el grupo de 1 a 4a con 29.74% (1036 casos), seguidamente del grupo de 20 a 59a con 26.29% (916 casos), el grupo de 5 a 9a con 13.63% (475 casos) el grupo men.1a con 12.28% (428 casos) el grupo de 10 a 19a con 12% (418 casos) y el grupo de 60 a más con 6.06% (211 casos).

La tasa de variación en el menor de 5 años, en la semana 8 respecto al promedio de las semanas 1-7 es del 6% y en el de mayores de 5 años es del 23%, es importante el seguimiento y análisis del diagnóstico médico. Los resultados de la vigilancia entomológica al mes de febrero tipificaron 51 localidades en escenario II. A la fecha no se han reportado casos autóctonos, se han reportados 2 casos importados e implementado las acciones de control.

## Conclusión

- La tendencia de casos de febriles ha disminuido en los diferentes grupos de edad en relación al año anterior, al analizar las causas se evidencia asociación con la disminución de las infecciones respiratorias agudas.
- La demanda de atenciones en el Hospital Regional de Huacho por casos de pacientes febriles se concentra en la emergencia.
- A la fecha no se ha encontrado casos probables, ni sospechosos de dengue el acumulado es de 0 casos.
- La vigilancia de febriles del Hospital Regional de Huacho es activa y las acciones de prevención y control se han intensificado ante la presencia de Aedes Aegypti y la dispersión de los escenarios entomológicos.

## Acciones Efectuadas

- a) Monitoreo diario, semanal y análisis de la tendencia de febriles.
- b) Identificación de localidades con mayor procedencia de casos de febriles
- c) Toma de muestras según protocolo de vigilancia de febriles y casos probables.
- d) Desarrollo de actividades de Información y comunicación a equipos de trabajo respecto a vigilancia de febriles.
- e) Difusión de afiches con definiciones de caso en los servicios de la institución y Centros Periféricos.
- f) Monitoreo de aspectos conceptuales en supervisión en servicio.
- g) Reuniones del equipo multidisciplinario para análisis de los resultados de la vigilancia entomológica y vigilancia epidemiológica.
- h) Visitas de coordinación con autoridades locales con quienes se desarrolla acciones integradas.
- i) Incorporación de información en la Sala Situacional en los Municipios Distritales.
- j) Difusión de spot radiales/ televisión/ redes sociales de identificación de febriles vs presencia vectorial.
- k) Socialización de la información en los CERS Regionales/ boletín epidemiológico.
- l) Controles focales integrados en escenario II.

## VIGILANCIA DE MUERTE MATERNA

La salud materna en los últimos años ha tenido mejoras importantes y continuas siendo uno de los temas de salud pública prioritarios a nivel nacional e internacional.

Las principales causas de defunción son: Enfermedad hipertensiva, edema y proteinuria en el embarazo, parto y puerperio (27.4%) Hemorragia obstétrica (23.9%) y Aborto (6.2%). La información generada a nivel nacional y por cada una de los departamentos del País permitirá orientar las políticas sociales, definir las acciones en salud pública y monitorizar los resultados de las intervenciones generadas en materia de salud materna.

En el Perú, el registro de muertes maternas se realiza mediante dos sistemas, siendo uno de ellos el Sistema Nacional de Vigilancia Epidemiológica, a través de la notificación inmediata (investigación y búsqueda de registros) realizada obligatoriamente por todos los establecimientos de salud del Ministerio de Salud, EsSalud, Fuerzas Armadas, Policía Nacional y privados. Esta notificación inmediata de muertes maternas está a cargo de las Oficinas de Epidemiología de las Direcciones Regionales de Salud y Direcciones de Salud. Una segunda forma de registro es a través del Sistema de Hechos Vitales (HV) que registra los certificados médicos de cada defunción ocurrida a nivel nacional, de igual manera de todas las entidades de salud sin excepción.

Los datos del nivel nacional reportan un total de 13 muertes maternas notificadas en lo que va del año, considerándose los casos de muerte materna de clasificación preliminar directa e indirecta. El total de muertes registradas en el año 2017 fueron 377 casos y en el 2018 disminuyeron a 362 casos. El Departamento de Lima tiene una mayor ocurrencia con 4 casos registrados.

UNIDAD DE EPIDEMIOLOGIA Y SALUD AMBIENTAL - RED HUAURA OYON

En la presente semana no se reportaron casos de muertes maternas. El acumulado a la fecha es 0 casos comparado con el año 2017 donde se notificó un caso de muerte materna indirecta proveniente del escenario costa y en el año 2018 no se produjo ningún caso.

Constantemente se vienen trabajando diferentes estrategias para reducir la mortalidad materna y neonatal, por medio de la implementación de acciones integrales, mediante la participación de los diferentes actores sociales y sectores involucrados.
