## Vigilancia de la Salud Pública

Mes JUNIO 2019 - Edición XXIV-UESA

### EDITORIAL

#### Vigilancia Epidemiológica del Síndrome de Guillain Barré

En el síndrome de Guillain-Barré, el sistema inmunitario del organismo ataca parte del sistema nervioso periférico. El síndrome puede afectar a los nervios que controlan los movimientos musculares así como a los que transmiten sensaciones dolorosas, térmicas y táctiles. Esto puede producir debilidad muscular y pérdida de sensibilidad en las piernas o brazos. Usualmente se presenta en la población de 1 a 2 casos por cada 100 000 habitantes.

La aparición del síndrome es precedida a menudo por infecciones bacterianas o víricas. Asimismo, puede ser desencadenado por vacunaciones o intervenciones quirúrgicas.

En los países afectados por casos de infección por el virus de Zika se ha descrito un aumento imprevisto de los casos de síndrome de Guillain-Barré. De acuerdo con los datos existentes, la explicación más probable es que la infección por el virus de Zika sea un desencadenante del síndrome.

A nivel nacional se ha decretado la alerta epidemiológica ante el incremento de casos en varias regiones del país por lo que se intensifican las acciones de vigilancia epidemiológicas, prevención y respuesta con el propósito de identificar y referir oportunamente los casos a los establecimientos de salud con mayor capacidad resolutive.

A todo caso sospechoso, se tomará una muestra de suero, heces, LCR, Orina. Las muestras obtenidas serán canalizadas en el menor tiempo posible desde el laboratorio de establecimiento hacia el INS a través del Laboratorio de Referencia Regional, según las recomendaciones establecidas. Todo caso nuevo debe ser inmediatamente investigado por el equipo de respuesta rápida del nivel local o regional procurando contar con la asesoría de médico neurólogo en el examen clínico.

## SITUACIÓN EPIDEMIOLÓGICA DE LAS ENFERMEDADES DIARREICAS AGUDAS (EDAs)

En la semana epidemiológica N° 24 se registran 235 episodios de enfermedad diarreica aguda (EDAs) con una TIA de 9.1 por 10000 habitantes; tendencia que disminuye en un 5% en relación a la semana anterior. De los casos notificados, 213 proceden de distritos ubicados en provincia de Huaura, 20 de distritos de la provincia de Oyón, se han atendido también a 17 personas procedentes de otras provincias (visitantes).

Considerando los grupos de edad; 23 casos se produjeron en menores de 01 año de edad, 57 casos en niños de 1 a 4 años de edad y 155 casos en mayores de 5 años de edad.

Los episodios presentados según tipos son 246 acuosa y 4 disintéricas. Se registran 2 hospitalizados; 1 paciente del grupo etáreo de menor de un año y el otro paciente en el grupo de uno a cuatro años. Los distritos que aportan con el mayor número de casos en el escenario costa son: Huacho, Santa María, Hualmay y Huaura.

El acumulado anual (a la semana N° 24) es de 7840 episodios (TIA 304.8 casos por 10000 habitantes). Los Distritos de mayor riesgo son: Huacho, Paccho, Leoncio Prado, Pachangara y Ihuari-Acotama.

En el canal endémico nos ubicamos en la Zona de Alarma contexto que nos permite proponer la evaluación continua de las localidades/centros poblados más afectados y continuar con intervenciones preventivas y de control.

## VIGILANCIA DE FEBRILES

Hasta la semana 24 se reportan 7871 pacientes febriles atendidos en los establecimientos de la Red Huaura Oyón, de ellos en Huacho 32.24% (2538), Santa María 18.43% (1451), Hualmay 14.28% (1124), Huaura 11.23% (884), Vegueta 9.47% (745), Sayán 4.55% (358), Carquin 3.74% (294), Pachangara 1.58% (124), Otros Distritos 1.37% (108), Oyón 0.99% (78), Ámbar 0.55% (43), Paccho 0.48% (38), Santa Leonor 0.33% (26), Leoncio Prado 0.32%

(25), Cochamarca 0.17% (13), Ihuari 0.11% (9) y Caujul 0.09% (7).

La distribución de febriles por grupo etáreo se concentra en el grupo de 1 a 4 años con 34.57% (2721 casos), seguidamente del grupo de 20 a 59 años con 22.41% (1764 casos), el grupo menores de 1 año con 13.38% (1053 casos) el grupo de 5 a 9 años con 13.3% (1047 casos) el grupo de 10 a 19 años con 10.72% (844 casos) y el grupo de 60 a más con 5.63% (443 casos).

**TOTAL DE FEBRILES POR GRUPO ETAREO**  
RED HUAURA OYON (ACUM. SE 24 - 2019)

| GRUPO ETAREO | TOTALES | PROP |
|--------------|---------|------|
| MEN.1A       | 1053    | 13.4 |
| DE 1 A 4A    | 2721    | 34.6 |
| DE 5 A 9A    | 1047    | 13.3 |
| DE 10 A 19A  | 844     | 10.7 |
| DE 20 A 59A  | 1764    | 22.4 |
| DE 60 A MAS  | 443     | 5.6  |
| TOTAL        | 7872    | 100  |

FUENTE: EPIDEMIOLOGIA RED HUAURA OYON

La tasa de variación en el menor de 5 años, en la semana 24 respecto al promedio de las semanas 1-23 es del -41% y en el de mayores de 5 años es del -48%, es importante el seguimiento y análisis del diagnóstico médico.

Los resultados de la vigilancia entomológica al mes de Junio tipificaron 12 localidades en escenario II. A la fecha se han reportado 03 casos probables de dengue, 02 de ellos posteriormente descartados y 01 caso confirmado que fue captado por nuestra jurisdicción procedente del Distrito de Ferreñafe, el acumulado es de 01 caso.

## Conclusión

- La tendencia de casos de febriles ha disminuido en los diferentes grupos de edad en relación al año anterior.
- La demanda de atenciones en el Hospital Regional de Huacho por casos de pacientes febriles se concentra en el servicio de emergencia.
- A la fecha se han reportado 03 casos probables de dengue, 02 de ellos posteriormente descartados y 01 caso confirmado que fue captado por nuestra jurisdicción procedente del Distrito de Ferreñafe, el acumulado es de 01 caso.
- La vigilancia de febriles del Hospital Regional de Huacho es activa y las acciones de prevención y control se han intensificado ante la presencia de Aedes Aegypti y la dispersión de los escenarios entomológicos.

## Acciones Efectuadas

- a) Monitoreo diario, semanal y análisis de la tendencia de febriles.
- b) Identificación de localidades con mayor procedencia de casos de febriles
- c) Toma de muestras según protocolo de vigilancia de febriles y casos probables.
- d) Desarrollo de actividades de Información y comunicación a equipos de trabajo respecto a vigilancia de febriles.
- e) Difusión de afiches con definiciones de caso en los servicios de la institución y Centros Periféricos.
- f) Monitoreo de aspectos conceptuales en supervisión en servicio.
- g) Reuniones del equipo multidisciplinario para análisis de los resultados de la vigilancia entomológica y vigilancia epidemiológica.
- h) Visitas de coordinación con autoridades locales con quienes se desarrolla acciones integradas.
- i) Incorporación de información en la Sala Situacional en los Municipios Distritales.
- j) Difusión de spot radiales/ televisión/ redes sociales de identificación de febriles vs presencia vectorial.
- k) Socialización de la información en los CERS Regionales/ boletín epidemiológico.
- l) Controles focales integrados en escenario II.

## VIGILANCIA DE MUERTE MATERNA

La salud materna en los últimos años ha tenido mejoras importantes y continuas siendo uno de los temas de salud pública prioritarios a nivel nacional e internacional.

Las principales causas de defunción son: Enfermedad hipertensiva, edema y proteinuria en el embarazo, parto y puerperio (27.4%) Hemorragia obstétrica (23.9%) y Aborto (6.2%). La información generada a nivel nacional y por cada una de los departamentos del País permitirá orientar las políticas sociales, definir las acciones en salud pública y monitorizar los resultados de las intervenciones generadas en materia de salud materna.

En el Perú, el registro de muertes maternas se realiza mediante dos sistemas, siendo uno de ellos el Sistema Nacional de Vigilancia Epidemiológica, a través de la notificación inmediata (investigación y búsqueda de registros) realizada obligatoriamente por todos los establecimientos de salud del Ministerio de Salud, EsSalud, Fuerzas Armadas, Policía Nacional y privados. Esta notificación inmediata de muertes maternas está a cargo de las Oficinas de Epidemiología de las Direcciones Regionales de Salud y Direcciones de Salud. Una segunda forma de registro es a través del Sistema de Hechos Vitales (HV) que registra los certificados médicos de cada defunción ocurrida a nivel nacional, de igual manera de todas las entidades de salud sin excepción.

Los datos del nivel nacional reportan un total de 29 muertes maternas notificadas en lo que va del año, considerándose los casos de muerte materna de clasificación preliminar directa e indirecta. El total de muertes registradas en el año 2017 fueron 377 casos y en el 2018 disminuyeron a 364 casos. Los Departamentos con mayor ocurrencia son Lima y Loreto con un total de 5 casos registrados.

FUENTE: EPIDEMIOLOGIA RED HUAURA OYON

En la presente semana en la Red Huaura Oyón no se reportaron casos de muerte materna. El acumulado a la fecha es 1 casos, comparado con el año 2017 donde se notificó un caso de muerte materna indirecta proveniente del escenario costa y en el año 2018 no se produjo ningún caso.

Constantemente se vienen trabajando diferentes estrategias para reducir la mortalidad materna y neonatal, por medio de la implementación de acciones integrales, mediante la participación de los diferentes actores sociales y sectores involucrados.
