La tuberculosis (TB) es una enfermedad infectocontagiosa, prevenible, curable y con un importante componente social. Según estimaciones de la Organización Mundial de la Salud (OMS), la incidencia anual de la TB a nivel mundial está disminuyendo lentamente, alrededor de 1,5% desde el año 2000; sin embargo, el número absoluto de casos de TB se viene incrementando.

ANTECEDENTES: Para el año 2015, se estima que se produjeron: 10,4 millones de casos de TB, 580 mil casos de TB multidrogorresistente (TB MDR), 1,2 millones de nuevos casos de TB/VIH y 1,8 millones de defunciones, por lo que el *Mycobacterium Tuberculosis* se ha convertido en el agente infeccioso que más muertes ocasiona, por encima del VIH y la malaria.

RESPUESTA: Como respuesta global a la epidemia de la TB, la OMS ha elaborado la estrategia "Fin de la Tuberculosis" cuyas metas al 2035, con respecto al año 2015, son: I) reducir en un 95% de muertes por TB; II)

reducir la tasa de incidencia de TB en un 90% (lograr una tasa < 10 casos por cada 100 mil habitantes), y III) lograr cero familias afectadas por costos catastróficos por TB (se refiere al pago directo por el usuario de gastos médicos y no médicos y costos indirectos que excedan un umbral dado de la renta del hogar, por ejemplo, el 20%). Estos logros serán posibles si basamos nuestras actividades en tres pilares, los cuales son: Pilar 1: Prevención y atención integral de la TB centrada en el paciente; Pilar 2: Políticas audaces y sistemas de soporte, y Pilar 3: Investigación e innovación intensificada.

En el Perú, la reciente Ley de Prevención y Control de la TB en el Perú (Ley 30287), declara de interés nacional la lucha contra la TB. Y en los últimos años, la Estrategia Sanitaria Nacional de Prevención y Control de la Tuberculosis (ESNPCT) del Ministerio de Salud (MINSA), ha obtenido avances significativos en el control de esta enfermedad; sin embargo, aún persisten desafíos que deben ser abordados.

La TB en el Perú ocupa el décimo quinto lugar de las causas de muerte, y el vigésimo séptimo puesto de carga de enfermedad medida por años de vida saludable perdidos (AVISA). Afecta, predominantemente, a los estratos sociales más pobres de las grandes ciudades del país. Las tasas notificadas de incidencia (casos nunca tratados por cada 100 mil habitantes) y de morbilidad total (nuevos y antes tratados por cada 100 mil habitantes) han disminuido entre 2 a 3% por año entre los años 2011 a 2016, de 97,4 a 87,6 en incidencia y de 109,7 a 99,5 en morbilidad.

## SITUACIÓN EPIDEMIOLÓGICA DE LAS ENFERMEDADES DIARREICAS AGUDAS (EDAs) EN LA RED DE SALUD HUAURA OYÓN A LA SE 45 - 2019

### I.- ANTECEDENTES

Las enfermedades diarreicas agudas (EDAs) constituyen un problema de salud pública en el mundo, especialmente en los países en desarrollo, representan una importante causa de morbilidad y la segunda causa de mortalidad en niños menores de 5 años. Generalmente es una enfermedad auto limitada que obedece a múltiples etiologías. Según estimaciones de la OMS anualmente causan la muerte de 760000 niños menores de 5 años y que ocurren más de mil millones de episodios. Los episodios múltiples de diarrea en el primer año de vida pueden deteriorar el estado nutricional y causar graves secuelas, generando costos económicos y sociales, de gran impacto.

Las diarreas se asocian directamente con las temperaturas, es decir, los casos tienden a disminuir conforme lo hacen las temperaturas en el periodo de lluvias. A su vez, para el inicio del verano, las diarreas presentan una alta frecuencia. Esto quiere decir que la aparición de altas temperaturas y la escasez de agua favorecen la aparición del patógeno o parásito causante de las mismas, acelera el crecimiento bacteriano y, junto con los factores conductuales de la persona, hacen que el patógeno entre en contacto con el huésped para causar estragos en el individuo.

### II.- SITUACION ACTUAL

Las EDAs sigue siendo una causa importante de morbilidad en la niñez en nuestro país, por la persistencia de los factores determinantes en una proporción importante de la población, además son enfermedades prevenibles relacionadas al menor acceso a servicio de agua potable, menor acceso a eliminación adecuada de excretas, así como a la práctica de hábitos inadecuados de higiene.

El sistema de vigilancia epidemiológica implementada como Red de Salud Huaura Oyón, y Hospital Huacho Huaura y SBS, permite monitorear la tendencia de las EDAs, esto gracias a través de la notificación semanal de los episodios de EDAs que son reportados por las diferentes IPRESS.

El acumulado anual (a la semana N° 45) de episodios presentados de Enfermedades Diarreicas Agudas (EDAs) en la Red de salud Huaura – Oyón es de 12840 (TIA 499.267 casos por 10000 habitantes). También se presentaron 383 episodios acumulados, provenientes de otros distritos.

Los distritos que presentan una mayor prevalencia de episodios de Enfermedades Diarreicas Agudas (EDAs), son: Huacho, Ihuari - Acotama, Paccho, Pachangara, Caujul, L. Prado y Cochamarca.

En el canal endémico para esta semana nos ubicamos en la Zona de Alarma, contexto que nos permite analizar una frecuencia esperada máxima en la presente semana epidemiológica, con lo cual se recomienda continuar con la evaluación continua de casos en las localidades y/o centros poblados más afectados y continuar con intervenciones preventivas, de promoción y de control.

Los distritos que aportan con el mayor número de casos en el escenario costa son: Huacho, S.María, Hualmay y Huaura y en el escenario Sierra Andajes, Checras, Oyon, Sta. Leonor, Ámbar.

**DISTRITOS QUE PRESENTAN INCREMENTO DE EDAs  
EN LA S.E. 45 - 2019 RED HUAURA OYON**

## Conclusión

- La tendencia de casos de febriles se ha incrementado en los diferentes grupos de edad en relación al año anterior, al analizar las causas se evidencia asociación con el cambio de temperatura ambiental y la presencia de las infecciones respiratorias agudas.
- La demanda de atenciones en el Hospital Regional de Huacho por casos de pacientes febriles se concentra en la emergencia.
- A la fecha no se ha encontrado casos probables, ni sospechosos de dengue el acumulado es de 0 casos.
- La vigilancia de febriles del Hospital Regional de Huacho es activa y las acciones de prevención y control se han intensificado ante la presencia de Aedes Aegypti y la dispersión de los escenarios entomológicos.

## Acciones Efectuadas

- a) Monitoreo diario, semanal y análisis de la tendencia de febriles.
- b) Identificación de localidades con mayor procedencia de casos de febriles
- c) Toma de muestras según protocolo de vigilancia de febriles y casos probables.
- d) Desarrollo de actividades de Información y comunicación a equipos de trabajo respecto a vigilancia de febriles.
- e) Difusión de afiches con definiciones de caso en los servicios de la institución y Centros Periféricos.
- f) Monitoreo de aspectos conceptuales en supervisión en servicio.
- g) Reuniones del equipo multidisciplinario para análisis de los resultados de la vigilancia entomológica y vigilancia epidemiológica.
- h) Visitas de coordinación con autoridades locales con quienes se desarrolla acciones integradas.
- i) Incorporación de información en la Sala Situacional en los Municipios Distritales.
- j) Difusión de spot radiales/ televisión/ redes sociales de identificación de febriles vs presencia vectorial.
- k) Socialización de la información en los CERS Regionales/ boletín epidemiológico.
- l) Controles focales integrados en escenario II.

## MORDEDURA CANINA

La rabia es una zoonosis transmitida desde los animales al hombre por la inoculación del virus de la rabia contenido en la saliva de los animales infectados, principalmente por medio de mordeduras. Se trata de una encefalitis aguda y progresiva que lleva a la muerte al 100% de los casos, pero es prevenible si es tratada oportunamente.

A la S.E N° 45 la tendencia de casos de Mordedura Canina ha incrementado en relación a los últimos 8 años en un 20.61% de casos reportados.

El acumulado a la fecha es de 564 casos, (TIA 21.93 por 10000 habitantes).

## VIGILANCIA DE MUERTE MATERNA

La salud materna en los últimos años ha tenido mejoras importantes y continuas siendo uno de los temas de salud pública prioritarios a nivel nacional e internacional.

Las principales causas de defunción son: Enfermedad hipertensiva, edema y proteinuria en el embarazo, parto y puerperio (27.4%) Hemorragia obstétrica (23.9%) y Aborto (6.2%). La información generada a nivel nacional y por cada una de los departamentos del País permitirá orientar las políticas sociales, definir las acciones en salud pública y monitorizar los resultados de las intervenciones generadas en materia de salud materna.

En el Perú, el registro de muertes maternas se realiza mediante dos sistemas, siendo uno de ellos el Sistema Nacional de Vigilancia Epidemiológica, a través de la notificación inmediata (investigación y búsqueda de registros) realizada obligatoriamente por todos los establecimientos de salud del Ministerio de Salud, EsSalud, Fuerzas Armadas, Policía Nacional y privados. Esta notificación inmediata de muertes maternas está a cargo de las Oficinas de Epidemiología de las Direcciones Regionales de Salud y Direcciones de Salud. Una segunda forma de registro es a través del Sistema de Hechos Vitales (HV) que registra los certificados médicos de cada defunción ocurrida a nivel nacional, de igual manera de todas las entidades de salud sin excepción.

Los datos del nivel nacional reportan un total de 154 muertes maternas notificadas hasta la S.E 22 del presente año, considerándose los casos de muerte materna de clasificación preliminar directa e indirecta, observando un aumento en comparación al año 2018 donde ocurrieron un total de 143 defunciones maternas. El Departamento de Lima Metropolitana tiene una mayor ocurrencia con 27 casos registrados.

FUENTE: BASE DE DATOS DE NOTIWEB HUAURA OYON. \* A LA SE 45

En la presente semana no se reportaron casos de muerte materna. El acumulado a la fecha es de 1 caso de muerte materna directa ocurrida en escenario Andino en la Provincia de Oyón, comparado con el año 2017; donde se notificó un caso de muerte materna indirecta proveniente del escenario costa y en el año 2018 no se produjo ningún caso. Constantemente se vienen trabajando diferentes estrategias para reducir la mortalidad materna y neonatal, por medio de la implementación de acciones integrales, mediante la participación de los diferentes actores sociales y sectores involucrados. En la red Huaura Oyón se realiza el seguimiento a las gestantes registradas a fin de prever complicaciones durante el embarazo y posibles muertes maternas. En la semana epidemiológica N°45, se tienen registradas del total de gestantes a 27 adolescentes, 219 adultas y 20 añosas.
